

How to run the Vista client installer silently

Solution

To run the client installer silently, use the following command:
`Vista_Client_6.13.0.exe /S /v" /qn "`

Details

To run the client installer silently, use the following command:
`Vista_Client_6.13.0.exe /S /v" /qn "`

If you want to manually extract the Vista Client.msi file from the Vista_Client_6.13.0.exe executable file, do the following:

1. Open a command prompt window
2. Change the directory specified in the command prompt window to the location of the Vista_Client_6.13.0.exe executable file.
3. Execute the following command: **Vista_Client_6.13.0.exe -a**

This will launch the client installer UI, but instead of installing the Vista Client, it will extract the contents of the installation package (including the Vista Client.msi file) to the directory that you specify.

The above examples both assume you are deploying Vista 6.13, but the same processes are valid for all Vista versions.

Keywords

MSI, remote deploy, client install, silent install
